- Building RESTful APIs with CRUD operations

Projects

MovieDB App – *Flutter, Firebase*

Search trending movies and bookmark movies with user authentication.

- State management with Provider and GetX
- MovieDB API with MVC pattern
- Used Firebase Auth for user authentication
- Firestore to store user's favorite movies and
- Firebase Storage to store user's profile image

Git: https://github.com/eizarphyo/moviedb_flutter

Note Database – *NodeJS, MongoDB, AWS*

A database for storing notes and user data..

- CRUD operations with RESTful APIs and error handlers
- User and guest authentication with JWT token
- Sending password reset mail to user's email
- MongoDB - TTL indexes
- Deployed on an Amazon Elastic Compute Cloud (AWS - EC2) using Ubuntu

Git: https://github.com/eizarphyo/note_database

Note Taker – *Angular, Note Database*

Web application for taking simple notes with guest authentication (guest user and their notes will be deleted after 30 days).

- Full stack web application
- Build frontend with Angular
- Used Note Database for backend
- HTTP requests, subscribing and unsubscribing observables

Git: https://github.com/eizarphyo/note_taker
